

# RF100 CARD READER EDGEVIS BODY WORN

## SECURE CHECK-OUT OF YOUR BODY WORN CAMERA

The RF100 card reader provides the capability to check out body-worn cameras by just tapping a RFID card to the reader at a location where cameras are held.

When set up as a pooled deployment, the system allows quick allocation of cameras to operators using an RFID based allocation system. Each operator uses an existing smart card, or is allocated an RFID card, which is registered in the evidence management system.

RFID cards are supplied with the card reader, one RFID card per user.
