EDGEVIS
MINICAM

Rapid deployment HD camera

From private security to local authorities, healthcare, transportation, logistics and first responders, the EdgeVis MiniCam is a revolutionary option for rapid deployment of CCTV cameras. With this solution there's no need to dig up roads or deploy vast amounts of cabling. Simply install your camera, power-up and you are ready to go.

Ideally suited to everyday surveillance as well as monitoring major incidents, events and vulnerable sites, these compact units can be installed quickly onto existing street furniture or dedicated mountings, offering a quick and easy solution for temporary and semi-permanent surveillance.

Unlike other solutions, the EdgeVis MiniCam is capable of streaming securely over both cellular and WIFI, even in the most remote areas where signal may be poor. Users can view feeds at the edge – from anywhere, access HD images, or PTZ the camera at source for even greater visibility. Advanced onboard analytics also provides a powerful approach to alerting users to events that require action, with remote viewing from any connected device.

Designed to protect both people and places, the EdgeVis MiniCam offers a sophisticated, cost effective and flexible all-in-one surveillance solution.

SURVEILLANCE | SECURITY | SAFETY

Key Features

- One-piece, lightweight and compact for quick and easy installation
- IP66 rating, robust enclosure and vandal-resistant
- 360degree PTZ 1080p camera, x12 Optical Zoom
- Up to 2TB of onboard storage
- Live streaming over cellular (2G/3G/4G) and WIFI
- Ultra-resilient, real-time video and audio streaming over cellular, from as low as 9Kbps
- Fully encrypted end-to-end government grade security
- No latency. No video corruption. No unexpected data costs
- Real time alerts by email, SMS, push alert, or direct to the Control Room
- Capture, enhance and share operational data such as stills and video even when network conditions are poor
- Extract high-res images to scrutinise individuals/areas of interest
- Easy integration into third-party systems
- Available with SafeZone accredited 2D video analytics for intrusion detection

Industry Use Cases

Cultural events and stadia
Supports remote monitoring of large-scale events including festivals, concerts, sporting events and public demonstrations for purposes of crowd control, health and safety, incident alerts, traffic management and crime reduction.

Major incidents
Provides a quick and effective means to monitor, manage and coordinate incidents including covert and overt mobile surveillance, accidents, public safety, natural disasters and emergency response.

Monitoring vulnerable facilities and sites
Proven to deter trespassers and thieves from remote and vulnerable facilities such as construction sites, critical national infrastructure and other isolated locations.

Street and housing-estate surveillance
Supports wider crime reduction and community safety projects by increasing people's perceptions of safety and their use of public places, as well as enforcing local traffic and parking regulations.

Vandalism and anti-social behaviour
Proven effective at deterring would-be offenders from acts of vandalism, physical violence, theft, unlicensed trading, and a range of other undesirable activities.

Fly-tipping and rural crime
Prevents opportunistic perpetrators from illegal waste dumping in primary hotspots, as well as securing a number of high-value assets including quality tools,equipment, livestock and machinery from farmland.

Built for your organisation

- Frontline law enforcement, tactical units, border security and defence organisations
- Healthcare professionals and first responders including paramedics, fire and emergency services
- Security personnel including manned guarding of commercial premises, logistics, transportation hubs and highways, construction sites and critical national infrastructure
- Local authorities, councils and community safety issues
